PROFILE

Economics student specializing in AI-driven decision systems, economic modeling, and applied simulation. Experienced building Monte Carlo models, risk-adjusted valuation frameworks, and AI-powered analytical tools to support strategic decision-making in manufacturing environments.

EDUCATION

Bachelor of Arts in Economics

Clemson University

Minor: Spanish Studies

Language: Spanish (Fluent)

May 2026

Clemson, SC

GPA: 3.50/4.00

RELEVANT EXPERIENCE

Undergraduate Researcher - AI Optimization in Manufacturing

Clemson University in partnership with BMW

Fall 2025 - Present

Clemson, SC

- Selected for a competitive, interdisciplinary research initiative in partnership with BMW, focused on building a data valuation and risk framework to govern third-party AI integration into proprietary manufacturing operations.
- Developed economic models and Monte Carlo simulations to quantify the value of BMW's proprietary manufacturing data and evaluate the financial tradeoffs of granting third-party AI vendors access to sensitive operational systems.
- Built a risk-scoring decision model that helps BMW determine when and how to share manufacturing data with external AI partners, balancing cost, exposure, and operational risk across hundreds of factory variables.
- Designed interactive dashboards and web-based tools in Python and Excel to surface data valuation outputs, AI access cost-benefit analyses, and risk exposure metrics for both technical teams and executive stakeholders.

Application Development (Carteroo.com)

Independent Project - Claude Code

- Designed and launched a full-stack, nationwide golf cart marketplace from concept to live product, identifying a gap in the market and building the end-to-end technical solution independently.
- Architected application logic across the full stack: authenticated listing creation, real-time filtered search, photo storage, and automated buyer-seller communication via transactional email.
- Applied economic reasoning to product and monetization design, implementing a Zillow/AutoTrader-style revenue model with Stripe-powered featured listing boosts and recurring dealer subscription tiers.

ADDITIONAL EXPERIENCE

Driver

Daniel Island Club

2023–Present

Charleston, SC

- Delivered reliable, client-facing service for 200+ members monthly in a high-expectation environment; maintained a 100% accident-free record.
- Supported private events and trained new staff, reinforcing safety, professionalism, and service standards.

Cashier

Publix Super Markets

2017–2023

Charleston, SC

- Managed high-volume transactions with consistent accuracy and efficiency.
- Trained and onboarded new employees, contributing to smooth operations and team performance.

STUDY ABROAD

Summer 2025

- Completed upper-level Spanish coursework, strengthening professional fluency and cross-cultural communication skills.
- Gained firsthand exposure to international environments through extensive travel across Spain.

TECHNICAL SKILLS

Python, SQL (PostgreSQL), and R; Monte Carlo simulation and scenario modeling; economic and financial modeling; data visualization and dashboard development (Tableau/Power BI); analytics tool and AI-assisted system design (Cursor AI); advanced Excel; Agile workflow (Jira/Scrum)
